

UNIQUE DRYING TECHNOLOGIES

# ROLL DRYING

unlimited possibilities

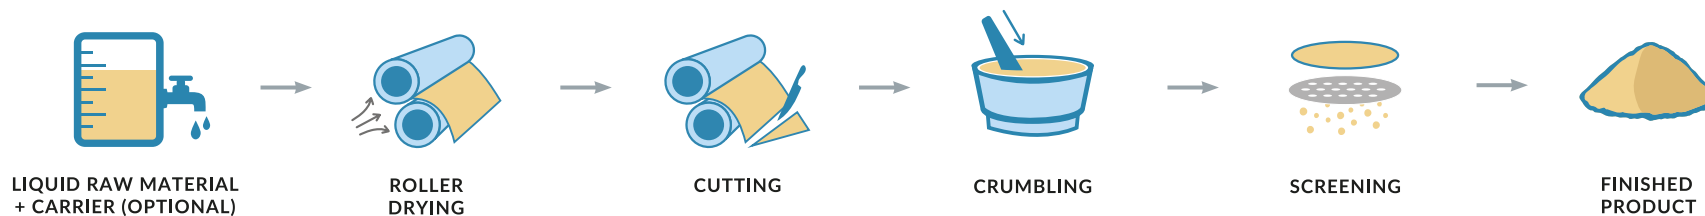

## ■ Description:

The technology with a **wide range of applications** for highly viscous solutions and unstable substances: liquids, gels, pastes and suspensions as well as fibrous materials. Thanks to this, it is possible to select variable cylinder temperatures and dosing and fluid feeding parameters for drying and to additionally use a vacuum chamber.

## ■ Main advantages of the technology:

- the product is obtained without the support of carrier or with a lower amount of it
- adaptation of finished products to individual needs
- short final product preparation time
- higher energy efficiency
- intense colour, taste and smell of the product

## ■ Production process:

## Product categories:

- service under development
